

Animated Pixel Marquee Creator Documentation

WP Marquee is the old name of this plugin. Please read "**Animated Pixel Marquee Creator**" when WP Marquee is written. I will update this document as soon as possible.

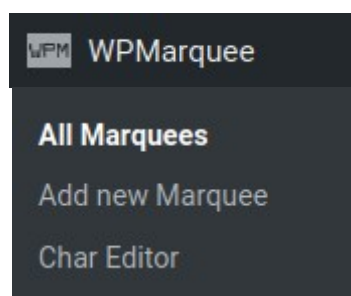

Wp Marquee generates animated pixel panel simulating the electronic signs that we can see on buses, metro, airports and advertisement. It also contains a char editor to modify or create your own font, logos, symbols or emblems.

1. Plugins installation

In the WordPress administration panel :

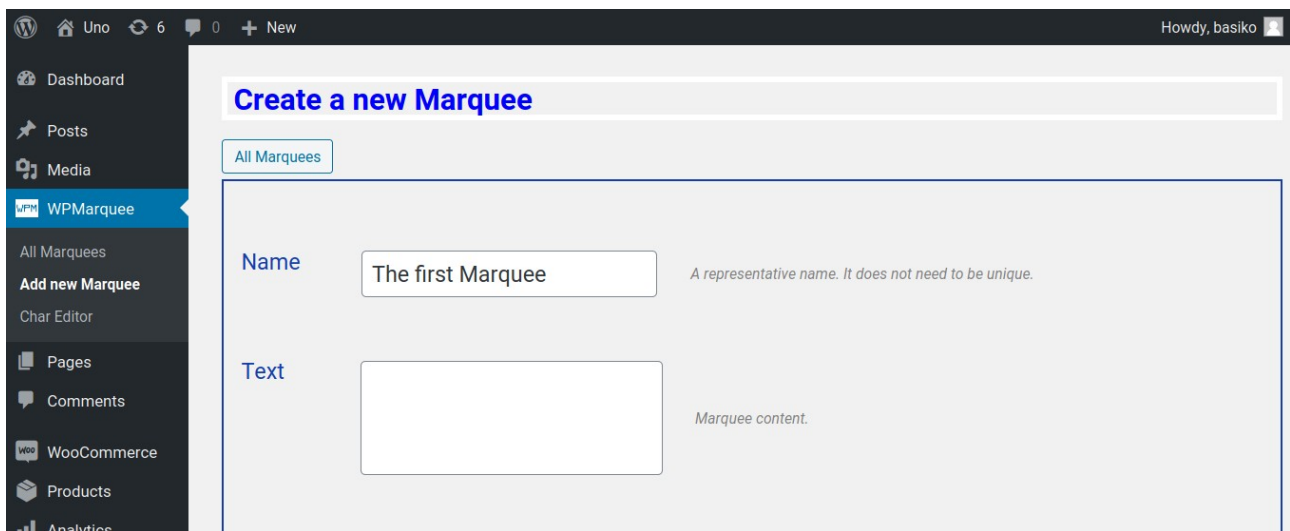

"Plugin" → **"Add new"** → **"Upload Plugin"** → **"Examine"** →
Search and select **"WPMarquee.zip"** → **"Install Now"** →
"Activate"

A new menu item will appear:

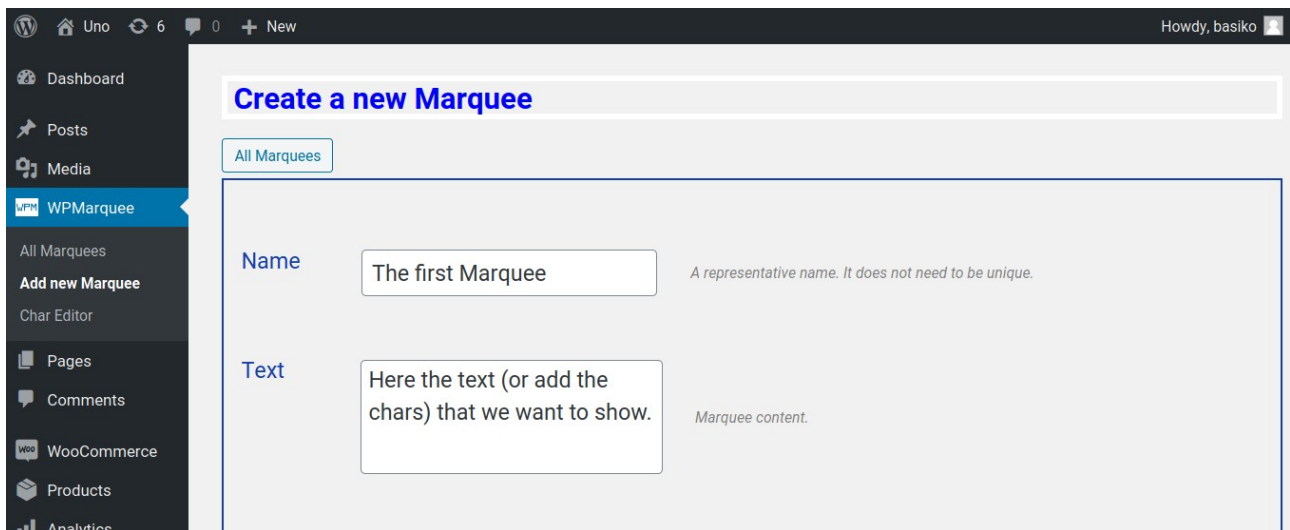

2. Add new Marquee

1. First we write a name for the Marquee:

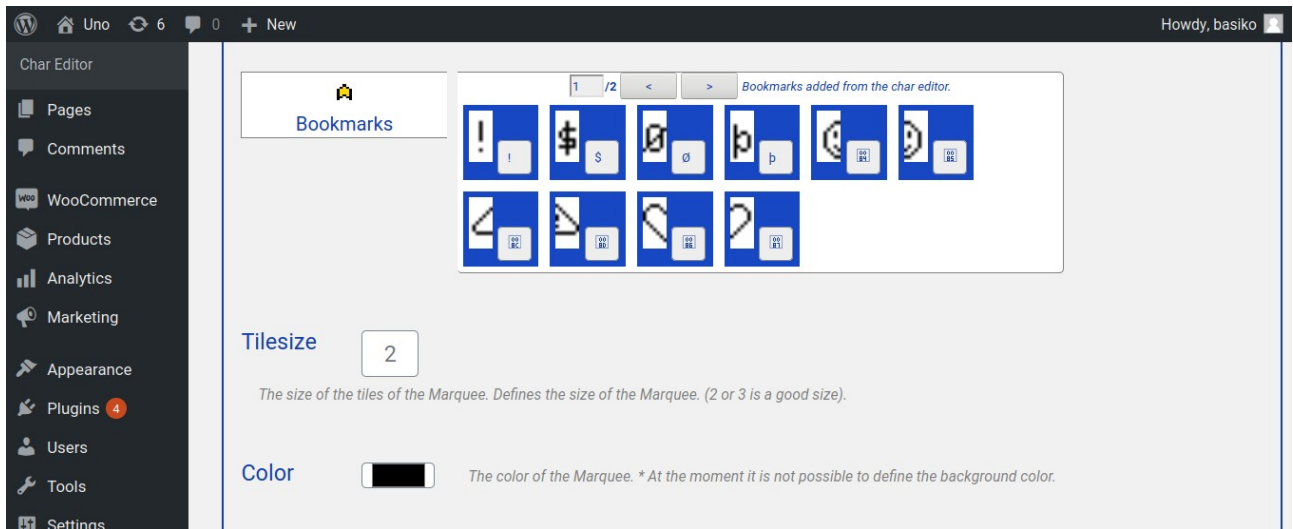

The screenshot shows the WordPress dashboard with the 'WPMarquee' plugin menu item highlighted. The 'Create a new Marquee' form is displayed. It has a sidebar with links to 'All Marquees', 'Add new Marquee', and 'Char Editor'. The main form area has a title 'Create a new Marquee' and a tab 'All Marquees'. There are two input fields: 'Name' with the value 'The first Marquee' and a hint 'A representative name. It does not need to be unique.', and 'Text' which is empty with a hint 'Marquee content.'.

2. We write the text (or add the Chars) that we want to show:

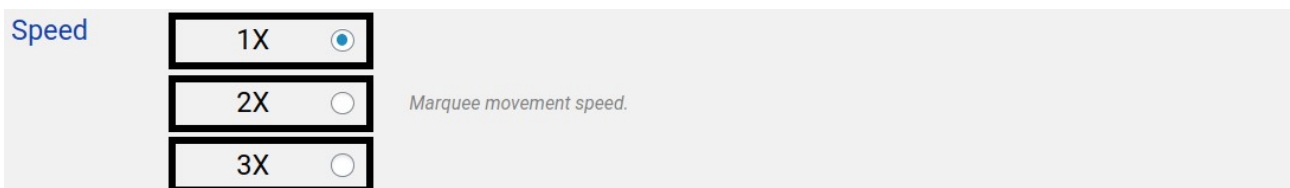

This screenshot shows the same 'Create a new Marquee' form, but the 'Text' field now contains the text 'Here the text (or add the chars) that we want to show.' The 'Name' field remains 'The first Marquee'. The hints for both fields are still present.

3. This is the list of bookmarks. Chars added to bookmarks in the Chars editor will be shows here:

- The tile size defines the pixel size and therefore the size of the panel.
- Color defines the color of active or filled pixels.

4. Speed determines how fast the text scrolls from right to left:

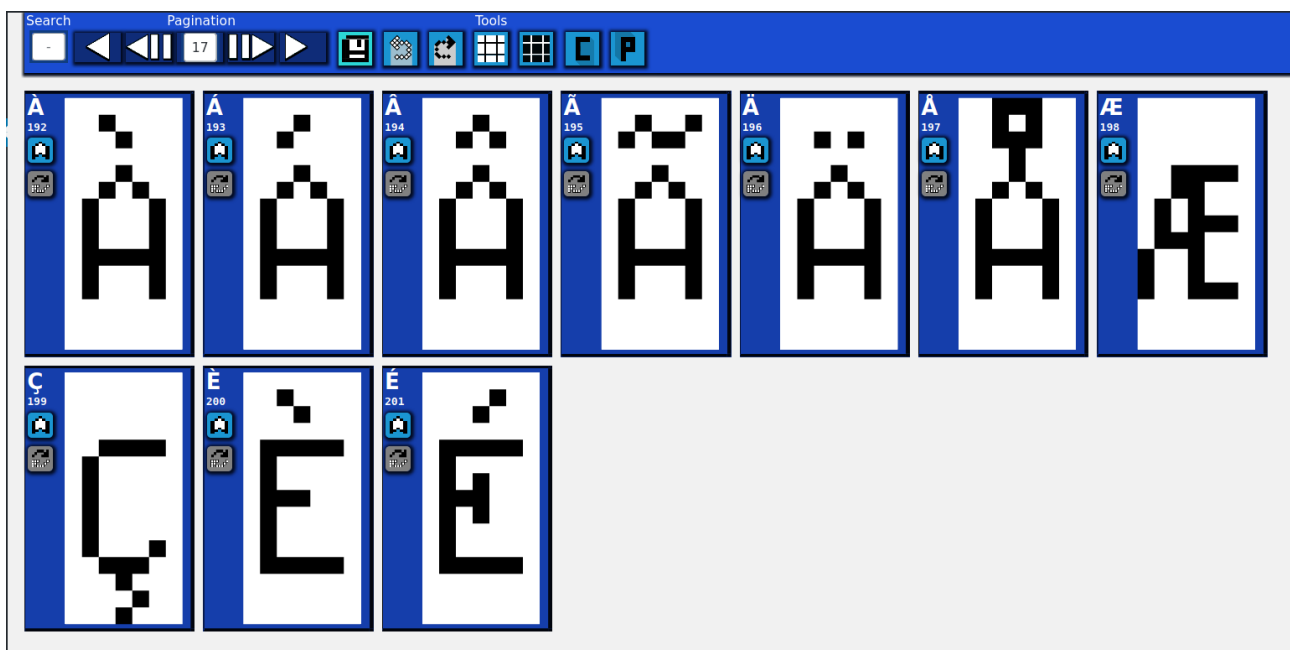

5. Finally click on Create/Update

Create/Update

3. The Char Editor

The char editor is where we edit or create chars, symbols, logos or emblems.

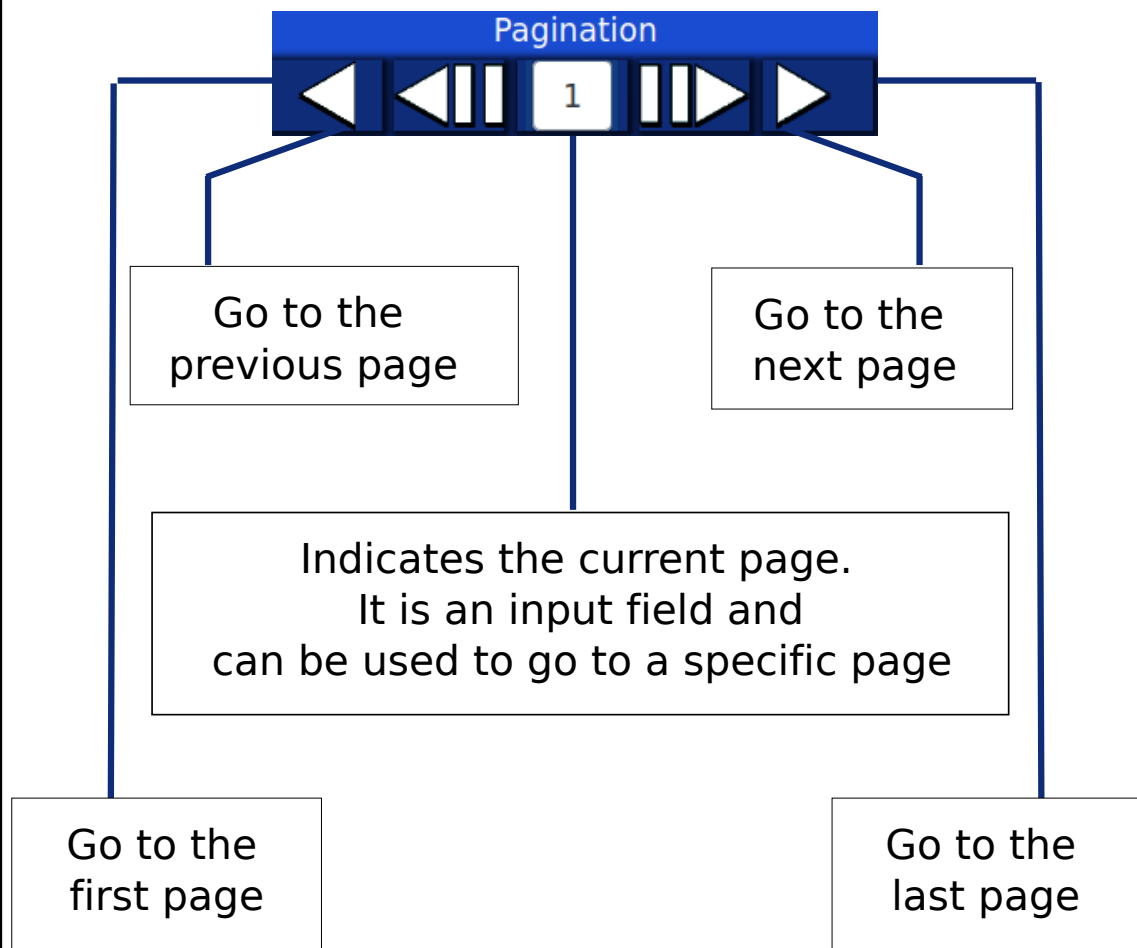

The fixed bar

This bar has the navigation and editing tools

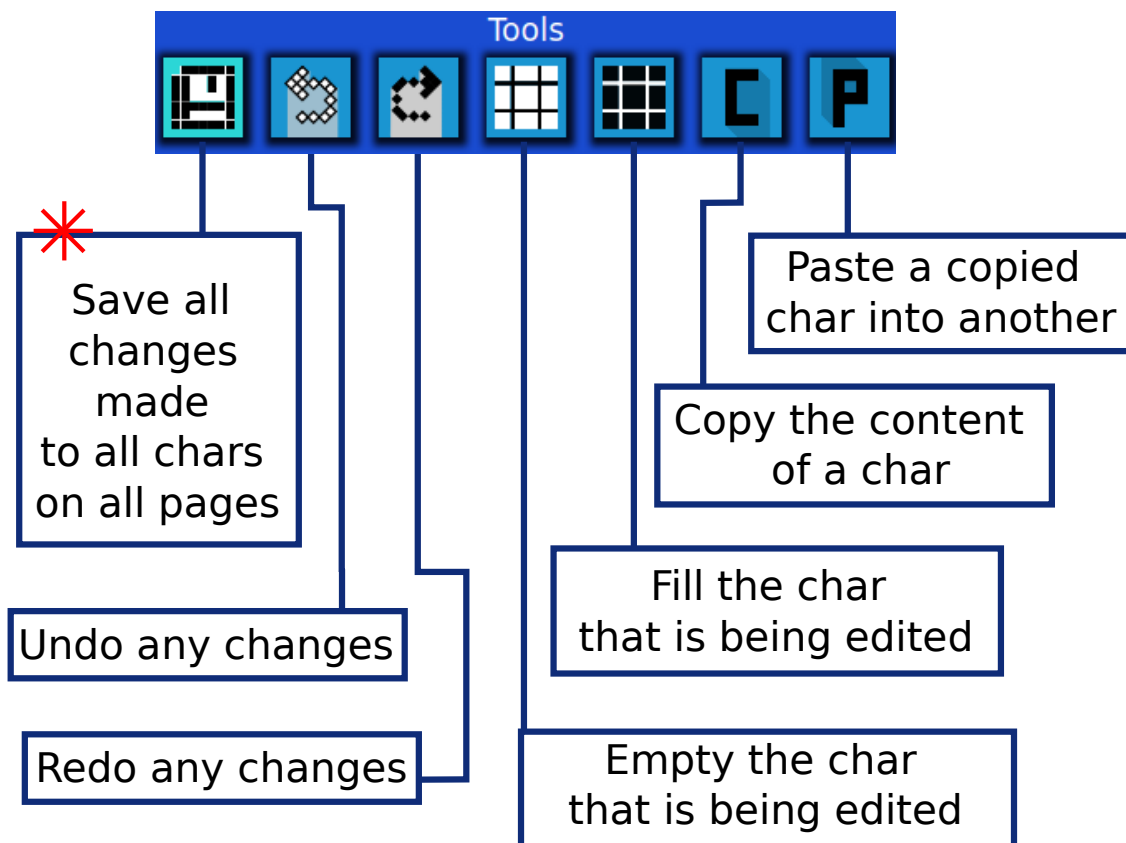

Char Editor has 23 pages

WPMarquee has 224 chars.
192 by default and 32 empty.
Char editor shows 10 chars per page.

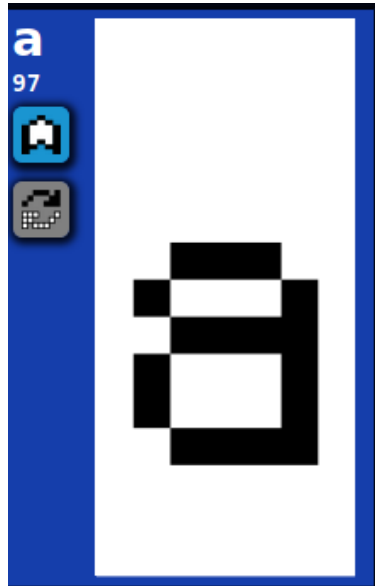

With the "Search"
tool we can look for particular Char,
Char editor will navigate to the page where the

With the exception of the Save button,
the rest of the tools only work when a char is activated.
activate the char automatically

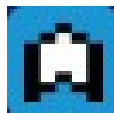

* The saved changes will be reflected in all Marquees.
In future versions it will be possible to create,
import or export new chars kits.

The chars

This is a deactivated char

Now you can't edit it but you can bookmark it.

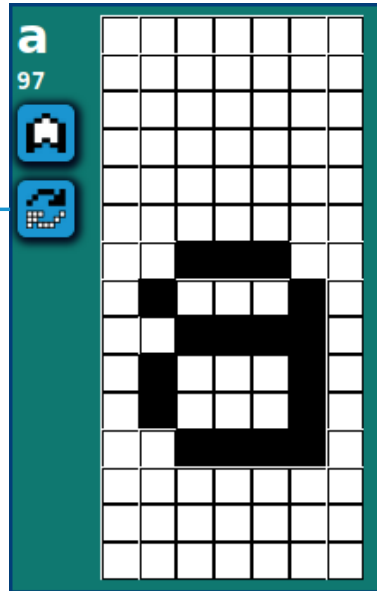

unmarked

marked

This is an activated char ready to edit

Restore
the char
to its last
saved state

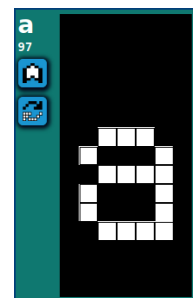

Tapping on a tile toggles the color.
Black is full and white is empty.

In this way you can draw figures like "a"

You can make a negative design.
The background will be the color
you choose and the
drawing will be black.

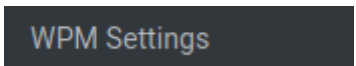

3. All Marquees

This is the table that contains all the Marquees

Marquees			6 items		
<div>Bulk Actions ▼ Apply Add New</div>			<div>« < 1 of 2 > »</div>		
<input type="checkbox"/>	Name	id ▲	shortcode		
<input type="checkbox"/>	Char editor (id:6)	6	[marquee id=6 link=]		
<input type="checkbox"/>	WPMarquee (id:7)	7	[marquee id=7 link=]		
<input type="checkbox"/>	cosas (id:8)	8	[marquee id=8 link=]		
<input type="checkbox"/>	Tutorial Marquee (id:9)	9	[marquee id=9 link=]		
<input type="checkbox"/>	expo marquee (id:10)	10	[marquee id=10 link=]		
<input type="checkbox"/>	Name	id ▲			
<div>Bulk Actions ▼ Apply</div>			<div>6 items « < 1 of 2 > »</div>		

It is limited to five marquees per page, but can be modified in the settings panel

It's in the WordPress Settings menu

Main settings

Marquees per page

5

Save Settings

The default settings is five Marquees.

Here you can delete one or more Marquees.

<input type="checkbox"/>	Name	id	shortcode
<input checked="" type="checkbox"/>	the next level (id:11)	11	[marquee id=11 link=]
<input checked="" type="checkbox"/>	expo marquee (id:10)	10	[marquee id=10 link=]
<input checked="" type="checkbox"/>	Tutorial Marquee (id:9)	9	[marquee id=9 link=]
<input type="checkbox"/>	cosas (id:8)	8	[marquee id=8 link=]

It is also the access point for editing a Marquee.

<input type="checkbox"/>	Name	id	shortcode
<input type="checkbox"/>	the next level (id:11)	11	[marquee id=11 link=]
<input type="checkbox"/>	expo marquee (id:10)	10	[marquee id=10 link=]

This is the shortcode that shows the Marquee in the content.

You just need to copy and paste it in a shortcode block as explained below.

<input type="checkbox"/>	Name	id	shortcode
<input type="checkbox"/>	the next level (id:11) Edit Delete	11	[marquee id=11 link=]
<input type="checkbox"/>	expo marquee (id:10)	10	[marquee id=10 link=]

In a post, page, or any type of content:

Click on

next

Widgets

and next

[/]

Shortcode

and paste the shortcode

[/] Shortcode

[marquee id=11 link=]

Finally, there are two more points to keep in mind:

1. A Marquee only differs from another on its "id". So modifying the id will change the Marquee.

<input type="checkbox"/> Char editor (id:6)	6	[marquee id=6 link=]
<input type="checkbox"/> WPMarquee (id:7)	7	[marquee id=7 link=]

2. As can be seen, in the shortcode there is an attribute called "link"

[/] Shortcode

[marquee id=1 link=]

With this attribute, you can give a Marquee the link property.

For example:

[/] Shortcode

[marquee id=1 link=www.wordpress.org /]

If the user clicks on the Marquee, they will be redirected to
<https://wordpress.org/>

It is important to mention that you can use the same Marquee with different links, modifying the link does not modify the Marquee.

Thats all! I wish you good luck and if you have any doubt or comments ,please, feel free to reach, the WP Marquee creator, Fernando Espinosa González.
